| Flower Explosion | 0ml/L | 0 | 0 | 0 | 1 | 0 | 0 | 1-2 | 1-2 | 1-2 | 1-2 | 0 |

Water temperature : 19-20 degrees C.
Optimal E.C. values : Early veg..... 1.2 to 1.5
Full veg.... 1.5 to 2.2
Early flower..1.8 to 2.2 - Mid flower....1.5 to 1.8 - Late flower...1.2 to 1.5

**Start using fertilizer** when your plant is around 10cm tall or has sprouted a few leaves.

**You can mix several fertilizers together** in the same water.

**It's better to use too little** with your fertilizers. A plant will be fine with few nutrients, but might not survive an overdose.

**When watering the plants,** give a good soaking, but no need to drown it.
