OUT DOORS : FEED PLANTS WITH FERTILIZER, 2 TO 3 TIMES PER WEEK.

Start using fertilizer when your plant is around 10cm tall or has sprouted a few leaves.

You can mix several fertilizers together in the same water.

It's better to use too little with your fertilizers. A plant will be fine with few nutrients, but might not survive an overdose.

When watering the plants, give a good soaking, but no need to drown it.
